SUMMARY

Physics Graduate with practical experience in Data Analytics, Data Science, Machine learning, and Research-based problem solving. Skilled in Python, SQL, and Data visualization tools for extracting insights and building analytical solutions. Strong background in research, critical thinking, and teamwork.

EDUCATION

NED University of Engineering & Technology.

Bachelor of Science in [PHYSICS](#):

Karachi, Pakistan | Oct 2021 – July 2025

APNA COLLEGE | UK Tech Hub.

Certifications in Data Analytics, & Data Science with AI

TECHNICAL SKILLS

- | | |
|---|---|
| • Programming & Databases | Python, SQL, MySQL, HTML. |
| • Data Analytics & Visualization | Pandas, NumPy, Power BI, Matplotlib, Seaborn, Excel, Web Scraping. |
| • Mathematics for AI | Calculus, Probability, Statistics, Linear Algebra, Differentiation. |
| • Tools & Platform | Jupyter Notebook, VS Code, Anaconda, PowerPoint. |
| • Soft Skills | Communication, Team Collaboration, Adaptability, Critical thinking. |

RESEARCH EXPERIENCE

Internship – Pakistan Meteorological Department

Mar 2024 – Apr 2024

- Assisted in weather data observation and Analysis.
- Learned practical application of environment and atmospheric data.

Internship – Gamma knife Stereotactic Radiosurgery

Aug 2023 – Sep 2023

- Observed medical physics and radiological procedures.
- Gained exposure to healthcare technology and research practices.

Internship – Pinnacle Full-stack | WSCube Tech

Apr 2024 – July 2024

- Creative interactive dashboard using Power BI.
- Performed data cleaning, analysis, and visualization of large datasets.
- Developed machine learning models using Python.
- Applied statistical techniques for business insights.
- Collaborate with team members on analytical projects.

PROJECTS

FINAL YEAR PROJECT (“Project: [Radiation Dosimetry & Predictive Modeling in Dental Imaging](#)”):

- Developed a statistical research framework to analyze occupational radiation exposure risks in dental imaging. Created a custom dataset of 60 cleaned observations using physical survey meters and simulated phantoms across multiple exposure settings. Successfully built and optimized a multiple Linear Regression model ($R^2 = 73.5\%$) to predict radiation dose distribution based on distance, angles, and machine power settings. Conducted a detailed comparative failure analysis against a Quadratic model to isolate overfitting and multicollinearity, ultimately delivering a validated, data-backed protocol for clinical safety planning.
 - Key Tools & Concepts: Multiple Linear Regression, Predictive Modeling, Statistical Signific (p-value), Data Volume Evaluation, Multicollinearity Diagnosis, Model Fit Optimization (RMSE, R^2).
